**Subject:** RE: 2020 NDAA PFAS Accomplishments Status

Hans asked for us to provide responses so the status prompts (I am not sure who asked these questions, but they arrived via Sven so I'm guessing that Michal or someone else in Congress submitted this request for an update). I drafted the red font (red font w/ no highlighting). Any edits to suggest? It sounds like they need the responses ASAP.

**Sec. 7321. Additions to toxics release inventory. OCSPP**

- Adds chemicals to TRI (including PFOA, PFOS, GenX, PFNA, PFHxS). Requires reporting by facilities that manufacture, process, or otherwise use more than 100 pounds of any of these chemicals.
  - **COMPLETE** – Signed 5/18/2020: EPA incorporated 172 PFAS to TRI.
- EPA must determine whether to revise the 100-pound reporting threshold *within 5 years*.

## Ex. 5 Deliberative Process (DP)

- Beyond the PFAS chemicals added by this bill, EPA must add a PFAS chemical to TRI for which it publishes a final toxicity value, issues a new or revised significant new use rule, or adds the chemical to the active portion of the TSCA inventory.

## Ex. 5 Deliberative Process (DP)

- Requires EPA, *within two years*, to further determine whether an additional list of PFAS chemicals should be included in TRI. If so, EPA must add them within two years. Includes provisions to protect CBI and avoid disclosure of protected information.

## Ex. 5 Deliberative Process (DP)
